Mobile App Development Lab Manual

PROGRAM 1

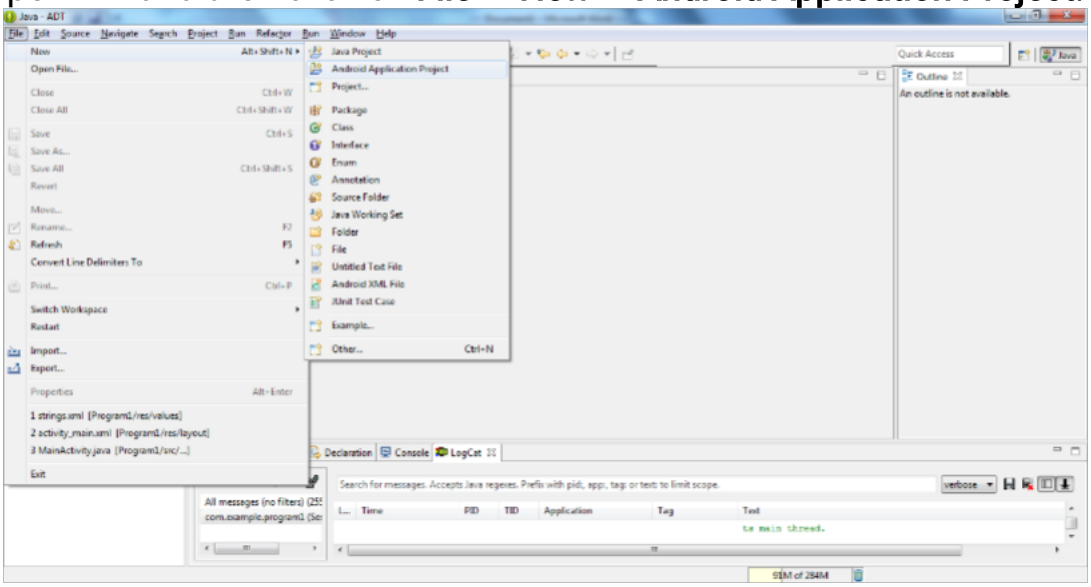
Aim:

To develop a Simple Android Application that uses GUI components, Font and Colors.

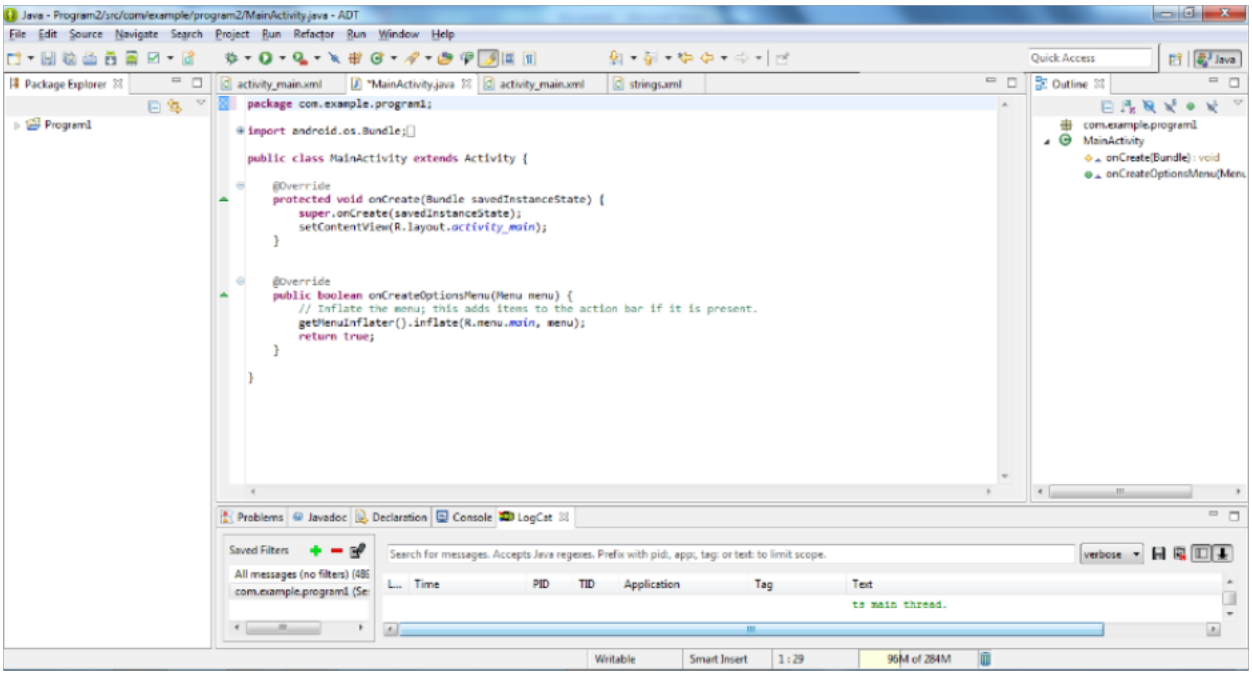
Procedure:

Creating a New project:

- Open IDE and then click on **File -> New -> Android Application Project.**



- Then type the Application name as "**Program1"** and click **Next.**
- Then click **Next.**
- Then click **Next.**
- Then select **Blank Activity** and click **Next.**
- Finally click F**inish**.
- It will take some time to build and to load the project.
- After completion it will look as given below.



Designing layout for the Android Application:

- Click on **Program1 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:orientation="vertical"
   android:layout_width="match_parent"
   android:layout_height="match_parent">

   <TextView
      android:id="@+id/textView"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_margin="30dp"
      android:gravity="center"
      android:text="@string/hello_world"
      android:textSize="25sp"
      android:textStyle="bold" />

   <Button
      android:id="@+id/button1"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_margin="20dp"
      android:gravity="center"
```

```
        android:text="@string/font_size"
        android:textSize="25sp" />

<Button
        android:id="@+id/button2"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_margin="20dp"
        android:gravity="center"
        android:text="@string/color_size"
        android:textSize="25sp" />

</LinearLayout>
```

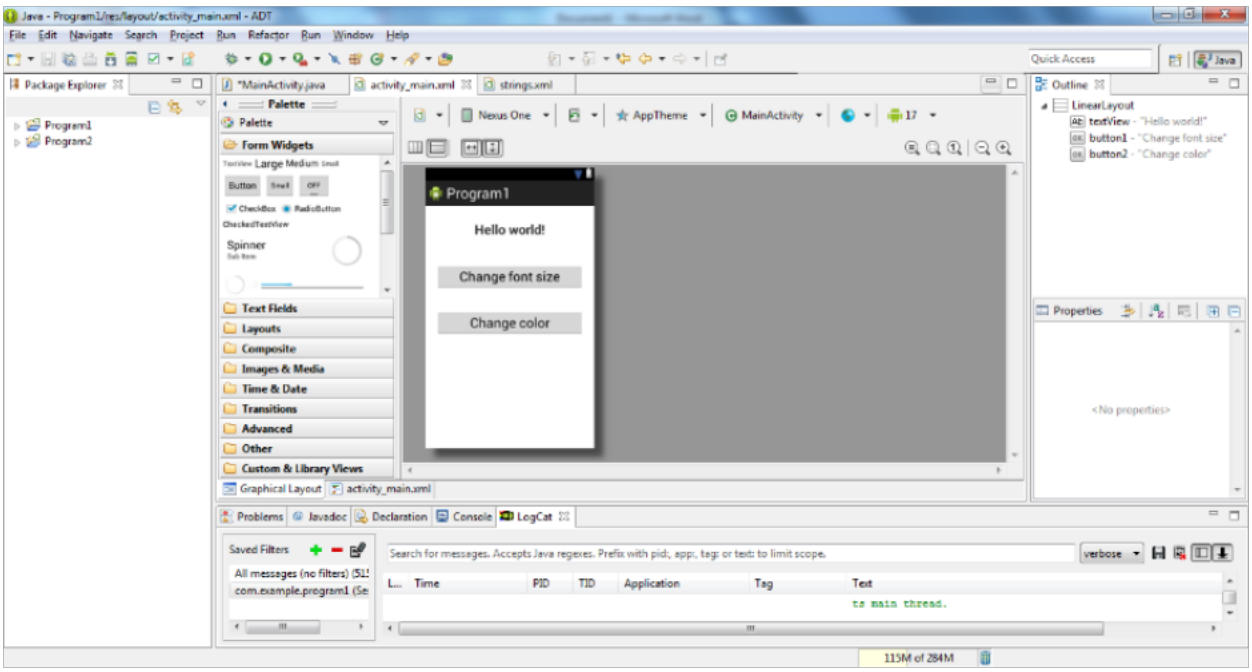
Defining strings for the Android Application:

- Click on **Program1 -> res -> values -> strings.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for strings.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<resources>
<string name="app_name">Program1</string>
<string name="action_settings">Settings</string>
<string name="hello_world">Hello world!</string>
<string name="font_size">Change font size</string>
<string name="color_size">Change color</string>
</resources>
```

- Now click on Design of **Activity_main.xml** and your application will look as given below.



- So now the designing and defining part is completed.

Java Coding for the Android Application:

- Click on **Program1 -> src -> com.example.program1 -> MainActivity.**
- Then delete the code which is there and type the code as given below.

Code for MainActivity.java:

```
package com.example.program1;

import android.os.Bundle;
import android.app.Activity;
import android.graphics.Color;
import android.view.Menu;
import android.view.View;
import android.widget.Button;
import android.widget.TextView;

public class MainActivity extends Activity {

   //Code Start
   int ch=1;
   float font=30;
   //Code End

   @Override
   protected void onCreate(Bundle savedInstanceState) {
```

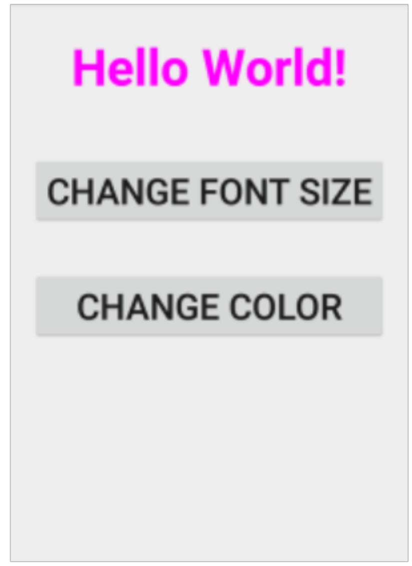
```
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

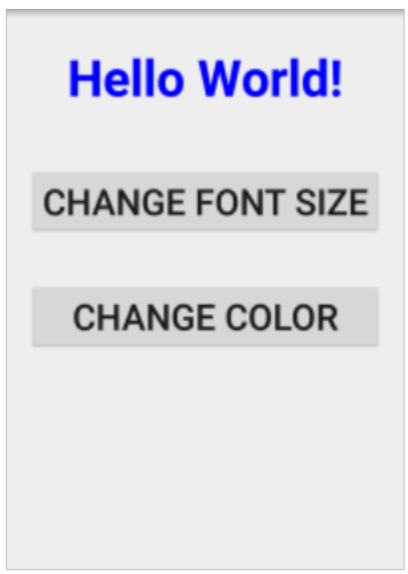
        //Code Start
        final TextView t= (TextView) findViewById(R.id.textView);
        Button b1= (Button) findViewById(R.id.button1);
        b1.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                t.setTextSize(font);
                font = font + 5;
                if (font == 50)
                    font = 30;
            }
        });
        Button b2= (Button) findViewById(R.id.button2);
        b2.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                switch (ch) {
                    case 1:
                        t.setTextColor(Color.RED);
                        break;
                    case 2:
                        t.setTextColor(Color.GREEN);
                        break;
                    case 3:
                        t.setTextColor(Color.BLUE);
                        break;
                    case 4:
                        t.setTextColor(Color.CYAN);
                        break;
                    case 5:
                        t.setTextColor(Color.YELLOW);
                        break;
                    case 6:
                        t.setTextColor(Color.MAGENTA);
                        break;
                }
                ch++;
                if (ch == 7)
                    ch = 1;
            }
        });
      //Code End
    }

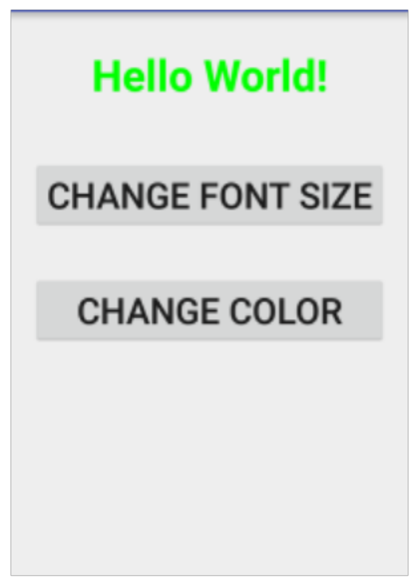
}
```

- So now the Coding part is also completed.
- Now run the application to see the output.

Output:







Result:

Thus a Simple Android Application that uses GUI components, Font and Colors is developed and executed successfully.

PROGRAM 2

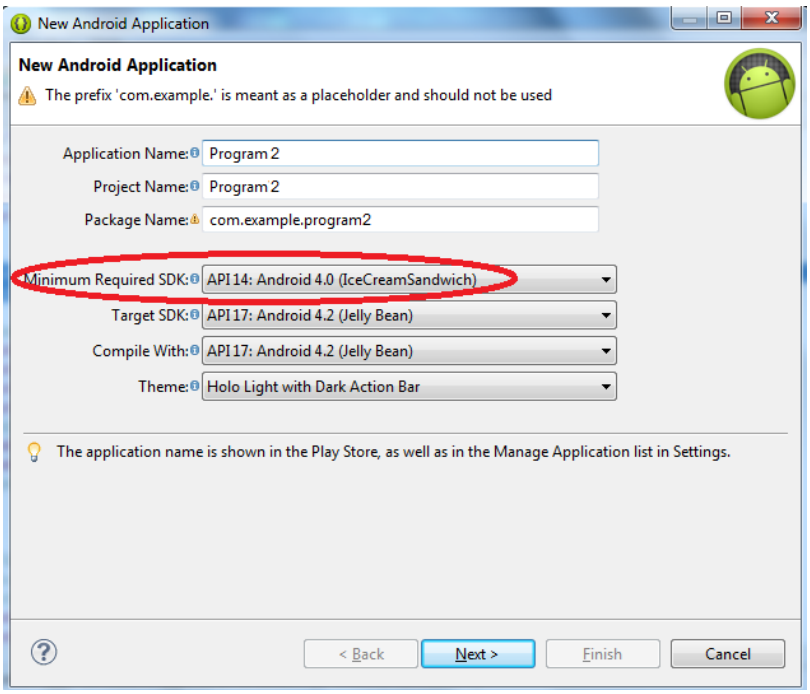
Aim:

To develop a Simple Android Application that uses Layout Managers and Event Listeners.

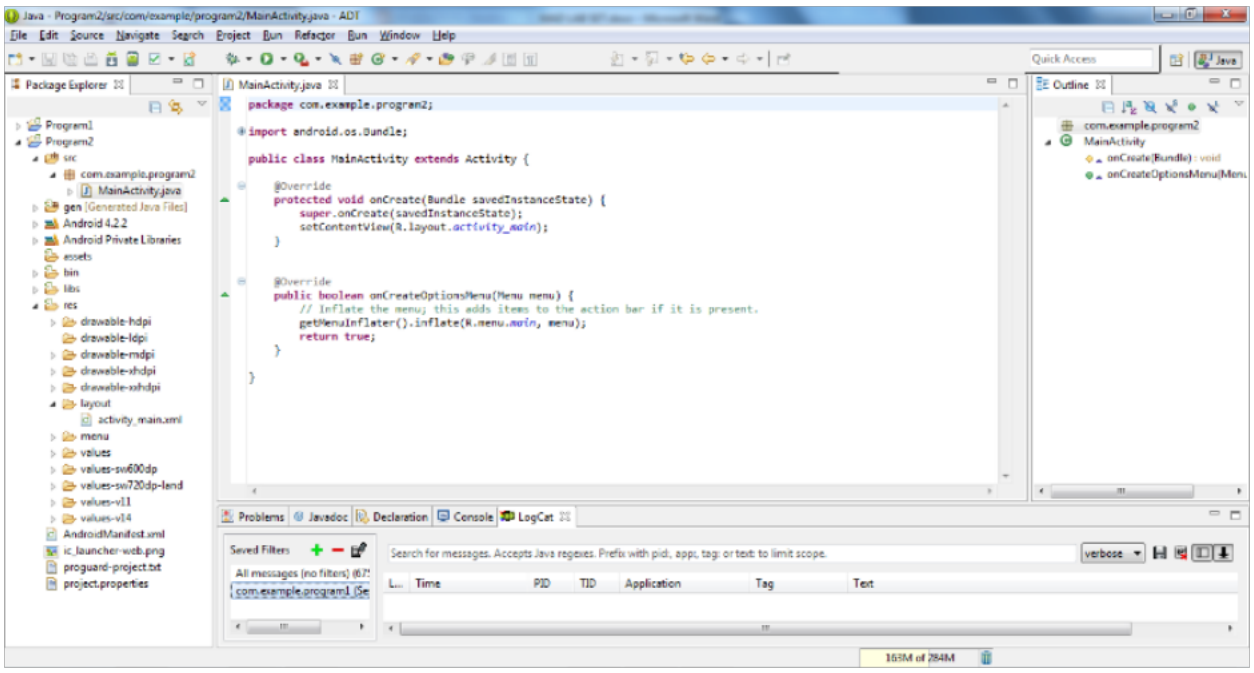
Procedure:

Creating a New project:

- Open IDE and then click on **File -> New -> Android Application Project.**
- Then type the Application name as **"Program2", Minimim Required SDK = API 14** and click **Next.**

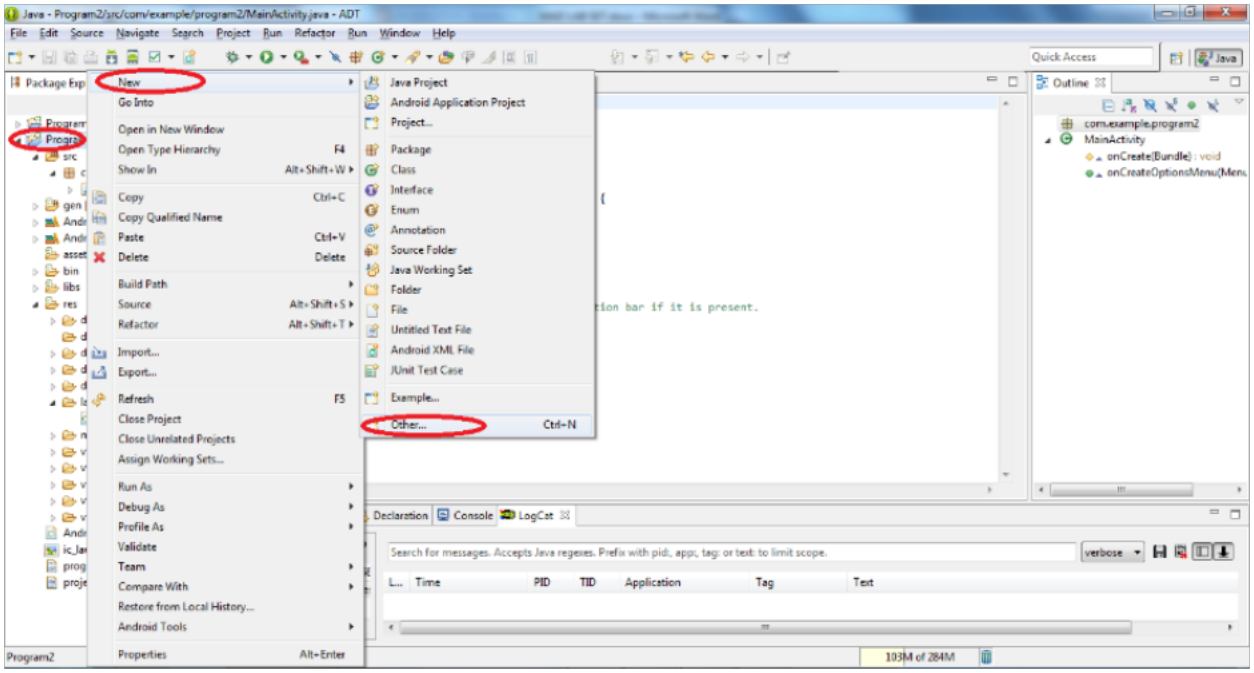


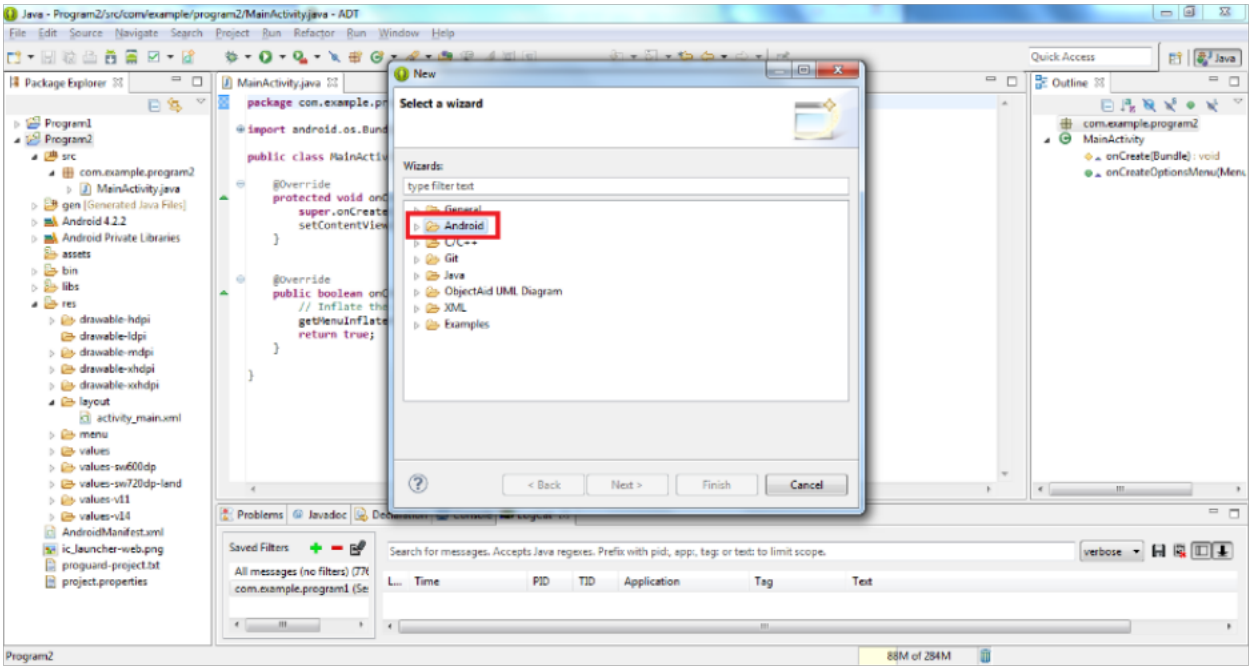
- Then click **Next.**
- Then click **Next.**
- Then select **Blank Activity** and click **Next.**
- Finally click F**inish**.
- It will take some time to build and to load the project.
- After completion it will look as given below.

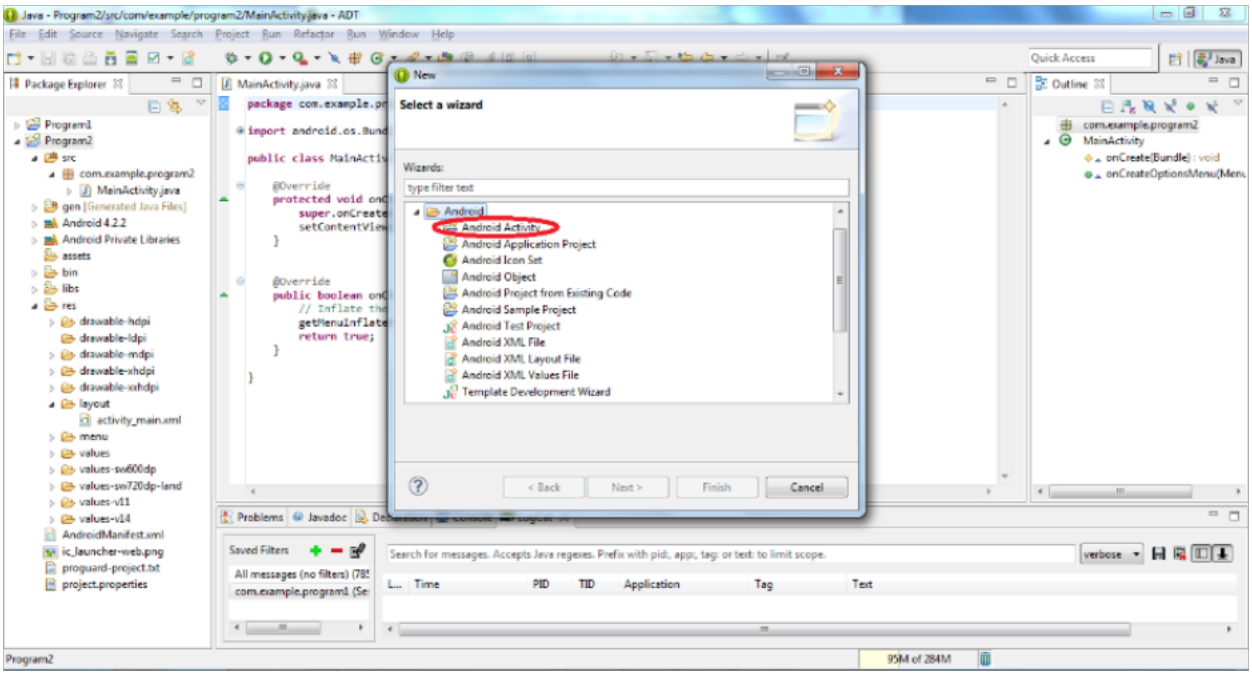


Creating Second Activity for the Android Application:

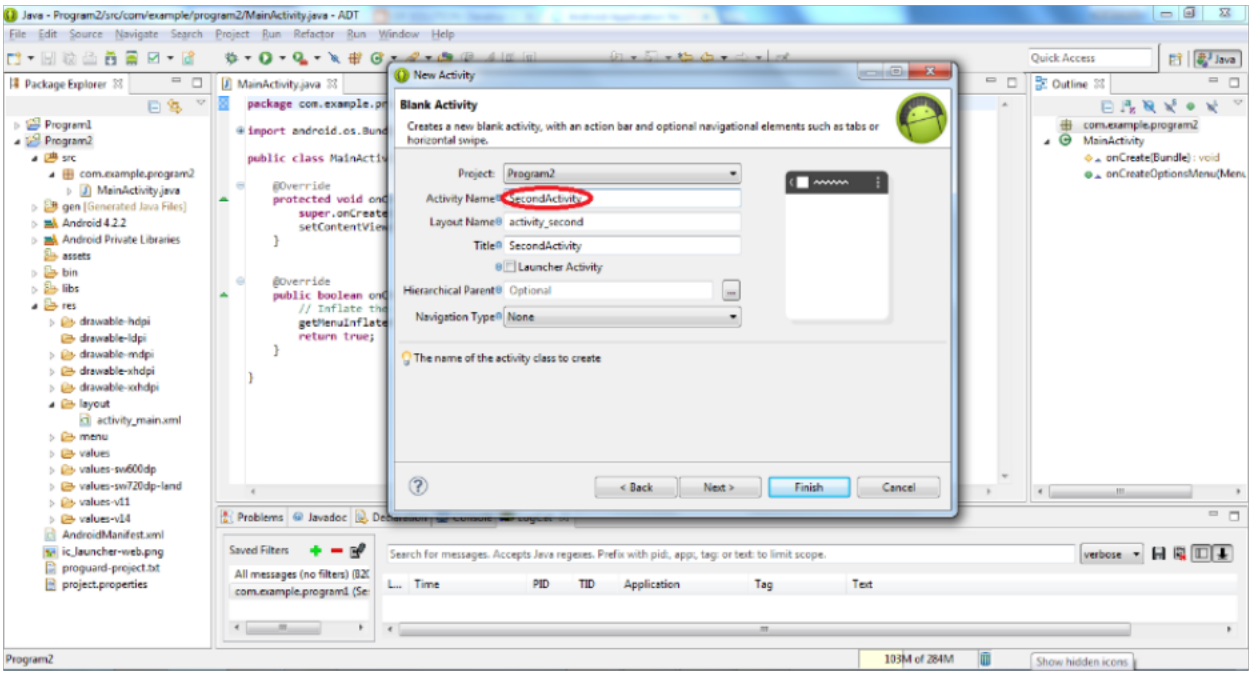
Click on Program2 -> New -> Other->Android->Android Activity.







- **Then Specify the Activity Name as SecondActivity and click Finish button.**



Designing layout for the Android Application:

Designing Layout for Main Activity:

- Click on **Program2 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
   xmlns:tools="http://schemas.android.com/tools"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   tools:context=".MainActivity">

   <LinearLayout
```

```
    android:layout_width="match_parent"
    android:layout_height="100dp">
    <TextView
        android:id="@+id/textView"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_margin="30dp"
        android:text="Details Form"
        android:textSize="25sp"
        android:gravity="center"/>
</LinearLayout>

<GridLayout
    android:id="@+id/gridLayout"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:layout_marginTop="100dp"
    android:layout_marginBottom="200dp"
    android:columnCount="2"
    android:rowCount="3">
    <TextView
        android:id="@+id/textView1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:layout_row="0"
        android:layout_column="0"
        android:text="Name"
        android:textSize="20sp"
        android:gravity="center"/>

    <EditText
        android:id="@+id/editText"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:layout_row="0"
        android:layout_column="1"
        android:ems="10"/>

    <TextView
        android:id="@+id/textView2"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:layout_row="1"
        android:layout_column="0"
        android:text="Reg.No"
        android:textSize="20sp"
        android:gravity="center"/>

    <EditText
        android:id="@+id/editText2"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
```

```
        android:layout_margin="10dp"
        android:layout_row="1"
        android:layout_column="1"
        android:inputType="number"
        android:ems="10"/>

    <TextView
        android:id="@+id/textView3"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:layout_row="2"
        android:layout_column="0"
        android:text="Dept"
        android:textSize="20sp"
        android:gravity="center"/>

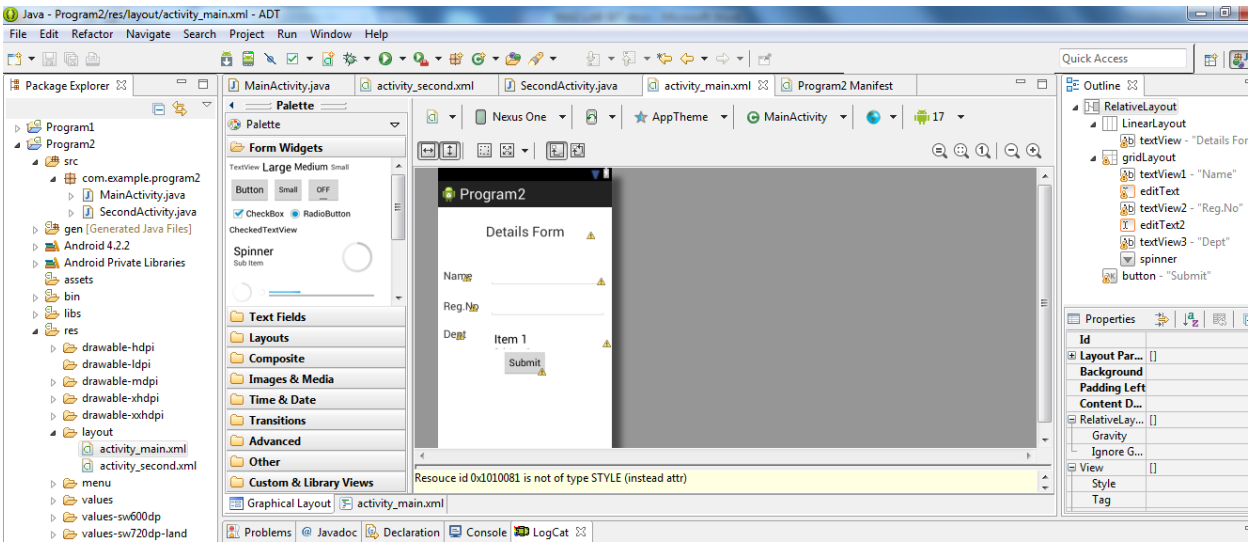
    <Spinner
        android:id="@+id/spinner"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:layout_row="2"
        android:layout_column="1"
        android:spinnerMode="dropdown"/>

  </GridLayout>

  <Button
    android:id="@+id/button"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_alignParentBottom="true"
    android:layout_centerInParent="true"
    android:layout_marginBottom="150dp"
    android:text="Submit"/>

</RelativeLayout>
```

- Now click on Design and your activity will look as given below.



- So now the designing part of Main Activity is completed.

Designing Layout for Second Activity:

- Click on **app -> res -> layout -> activity_second.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_second.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   xmlns:tools="http://schemas.android.com/tools"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   tools:context="com.example.devang.exno2.SecondActivity"
   android:orientation="vertical"
   android:gravity="center">

   <TextView
      android:id="@+id/textView1"
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:layout_margin="20dp"
      android:text="New Text"
      android:textSize="30sp"/>

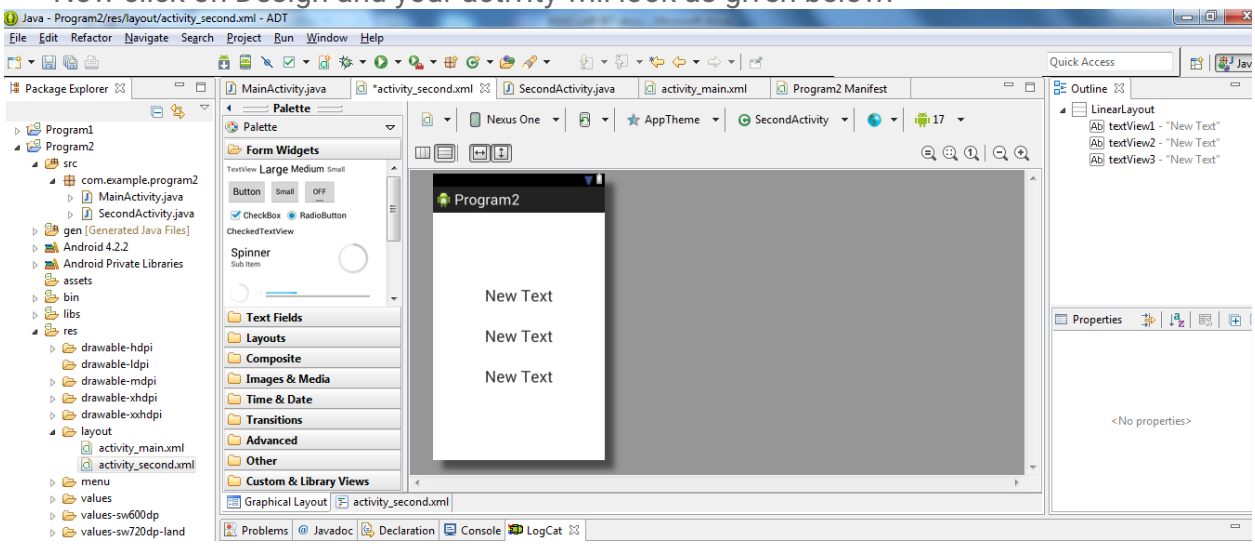
   <TextView
      android:id="@+id/textView2"
      android:layout_width="wrap_content"
```

```
        android:layout_height="wrap_content"
        android:layout_margin="20dp"
        android:text="New Text"
        android:textSize="30sp"/>

    <TextView
        android:id="@+id/textView3"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="20dp"
        android:text="New Text"
        android:textSize="30sp"/>

</LinearLayout>
```

- Now click on Design and your activity will look as given below.



Java Coding for the Android Application:

Java Coidng for Main Activity:

- Click on **Program2 -> src -> com.example.program2 -> MainActivity.**
- Then delete the code which is there and type the code as given below.

Code for MainActivity.java:

```
package com.example.program2;

import android.os.Bundle;
import android.app.Activity;
import android.content.Intent;
import android.view.View;
import android.widget.ArrayAdapter;
import android.widget.Button;
import android.widget.EditText;
```

```
import android.widget.Spinner;

public class MainActivity extends Activity {

        //Defining the Views
    EditText e1,e2;
    Button bt;
    Spinner s;

    //Data for populating in Spinner
    String [] dept_array={"ISE","ECE","CSE","Mech","Civil"};

    String name,reg,dept;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        //Referring the Views
        e1= (EditText) findViewById(R.id.editText);
        e2= (EditText) findViewById(R.id.editText2);

        bt= (Button) findViewById(R.id.button);

        s= (Spinner) findViewById(R.id.spinner);

        //Creating Adapter for Spinner for adapting the data from array to Spinner
        ArrayAdapter adapter= new
ArrayAdapter(MainActivity.this,android.R.layout.simple_spinner_item,dept_array);
        s.setAdapter(adapter);

        //Creating Listener for Button
        bt.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {

                //Getting the Values from Views(Edittext & Spinner)
                name=e1.getText().toString();
                reg=e2.getText().toString();
                dept=s.getSelectedItem().toString();

                //Intent For Navigating to Second Activity
                Intent i = new Intent(MainActivity.this,SecondActivity.class);

                //For Passing the Values to Second Activity
                i.putExtra("name_key", name);
                i.putExtra("reg_key",reg);
                i.putExtra("dept_key", dept);

                startActivity(i);

            }
        });
    }
```

}

- So now the Coding part of Main Activity is completed.

Java Coding for Second Activity:

- Click on **Program2 -> src -> com.example.program2 -> SecondActivity.**
- Then delete the code which is there and type the code as given below.

Code for SecondActivity.java:

```
package com.example.program2;

import android.os.Bundle;
import android.app.Activity;
import android.content.Intent;

import android.widget.TextView;

public class SecondActivity extends Activity {

        TextView t1,t2,t3;

   String name,reg,dept;

   @Override
   protected void onCreate(Bundle savedInstanceState) {
      super.onCreate(savedInstanceState);
      setContentView(R.layout.activity_second);

      t1= (TextView) findViewById(R.id.textView1);
      t2= (TextView) findViewById(R.id.textView2);
      t3= (TextView) findViewById(R.id.textView3);

      //Getting the Intent
      Intent i = getIntent();

      //Getting the Values from First Activity using the Intent received
      name=i.getStringExtra("name_key");
      reg=i.getStringExtra("reg_key");
      dept=i.getStringExtra("dept_key");

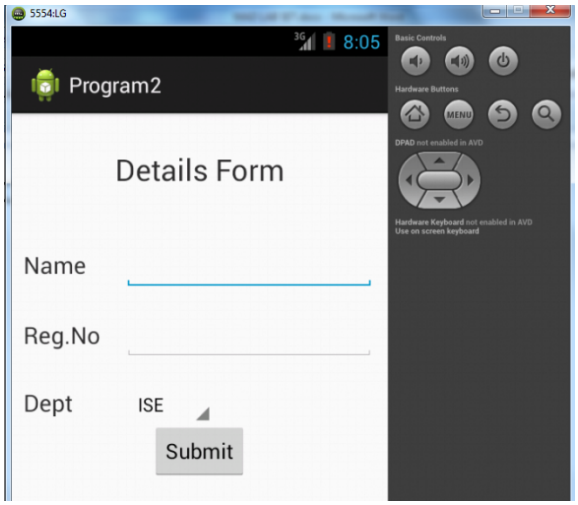
      //Setting the Values to Intent
      t1.setText(name);
      t2.setText(reg);
      t3.setText(dept);

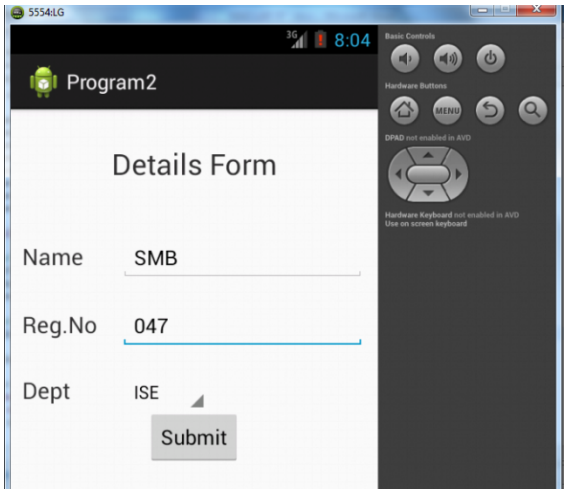
   }

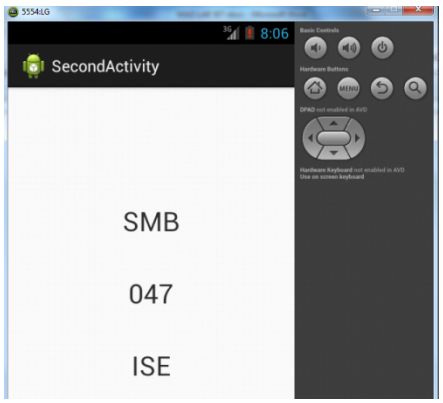
}
```

- So now the Coding part of Second Activity is also completed.
- Now run the application to see the output.

Output:







Result:

Thus a Simple Android Application that uses Layout Managers and Event Listeners is developed and executed successfully.

PROGRAM 3

Aim:

To develop a Simple Android Application for Native Calculator.

Procedure:

Designing layout for the Android Application:

Designing Layout for Main Activity:

- Click on **Program3 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<LinearLayout
   xmlns:android="http://schemas.android.com/apk/res/android"
   android:orientation="vertical"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
```

```
android:layout_margin="20dp">

<LinearLayout
   android:id="@+id/linearLayout1"
   android:layout_width="match_parent"
   android:layout_height="wrap_content"
   android:layout_margin="20dp">

   <EditText
      android:id="@+id/editText1"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_weight="1"
      android:inputType="numberDecimal"
      android:textSize="20sp" />

   <EditText
      android:id="@+id/editText2"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_weight="1"
      android:inputType="numberDecimal"
      android:textSize="20sp" />

</LinearLayout>

<LinearLayout
   android:id="@+id/linearLayout2"
   android:layout_width="match_parent"
   android:layout_height="wrap_content"
   android:layout_margin="20dp">

   <Button
      android:id="@+id/Add"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_weight="1"
      android:text="+"
      android:textSize="30sp"/>

   <Button
      android:id="@+id/Sub"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_weight="1"
      android:text="-"
      android:textSize="30sp"/>

   <Button
      android:id="@+id/Mul"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:layout_weight="1"
      android:text="*"
      android:textSize="30sp"/>
```

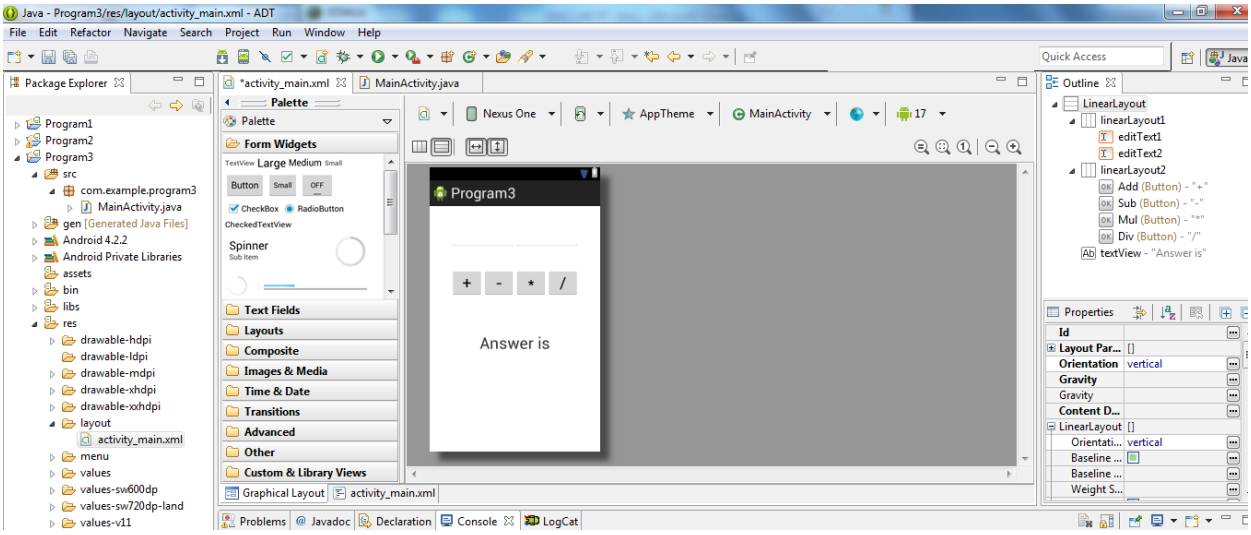
```
    <Button
        android:id="@+id/Div"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="/"
        android:textSize="30sp"/>

</LinearLayout>

<TextView
    android:id="@+id/textView"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:layout_marginTop="50dp"
    android:text="Answer is"
    android:textSize="30sp"
    android:gravity="center"/>

</LinearLayout>
```

- Now click on Design and your activity will look as given below.



- So now the designing part is completed.

Java Coding for the Android Application:

- Click on **Program3 ->src -> com.example.Program3 -> MainActivity.**

```
package com.example.program3;

import android.os.Bundle;
import android.app.Activity;
import android.text.TextUtils;
import android.view.View;
import android.view.View.OnClickListener;
```

```
import android.widget.Button;
import android.widget.EditText;
import android.widget.TextView;

public class MainActivity extends Activity implements OnClickListener{

    //Defining the Views
   EditText Num1;
   EditText Num2;
   Button Add;
   Button Sub;
   Button Mul;
   Button Div;
   TextView Result;

   @Override
   public void onCreate(Bundle savedInstanceState)
   {
      super.onCreate(savedInstanceState);
      setContentView(R.layout.activity_main);

      //Referring the Views
      Num1 = (EditText) findViewById(R.id.editText1);
      Num2 = (EditText) findViewById(R.id.editText2);
      Add = (Button) findViewById(R.id.Add);
      Sub = (Button) findViewById(R.id.Sub);
      Mul = (Button) findViewById(R.id.Mul);
      Div = (Button) findViewById(R.id.Div);
      Result = (TextView) findViewById(R.id.textView);

      // set a listener
      Add.setOnClickListener(this);
      Sub.setOnClickListener(this);
      Mul.setOnClickListener(this);
      Div.setOnClickListener(this);
   }

   @Override
   public void onClick (View v)
   {

      float num1 = 0;
      float num2 = 0;
      float result = 0;
      String oper = "";

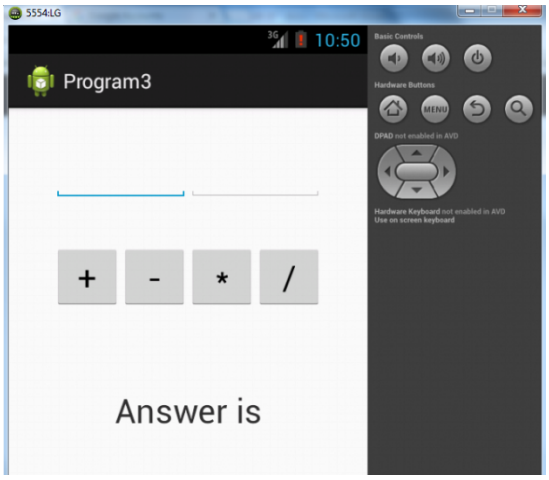
      // check if the fields are empty
      if (TextUtils.isEmpty(Num1.getText().toString()) || TextUtils.isEmpty(Num2.getText().toString()))
            return;

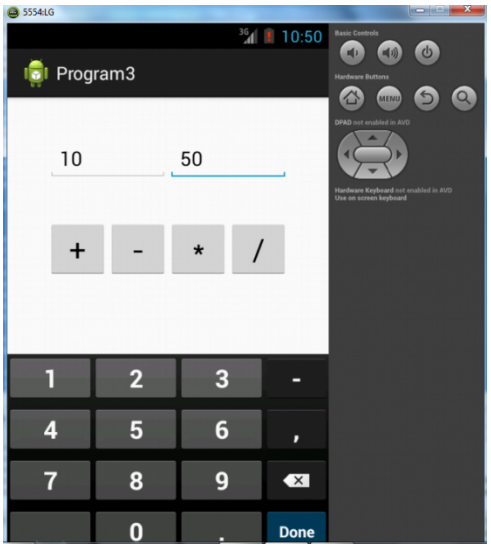
      // read EditText and fill variables with numbers
      num1 = Float.parseFloat(Num1.getText().toString());
      num2 = Float.parseFloat(Num2.getText().toString());
```

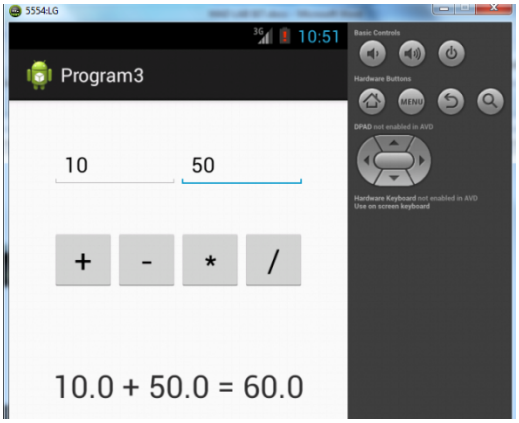
```
        // defines the button that has been clicked and performs the corresponding operation
        // write operation into oper, we will use it later for output
        switch (v.getId())
        {
           case R.id.Add:
              oper = "+";
              result = num1 + num2;
              break;
           case R.id.Sub:
              oper = "-";
              result = num1 - num2;
              break;
           case R.id.Mul:
              oper = "*";
              result = num1 * num2;
              break;
           case R.id.Div:
              oper = "/";
              result = num1 / num2;
              break;
           default:
              break;
        }
        // form the output line
        Result.setText(num1 + " " + oper + " " + num2 + " = " + result);
     }

  }
```

- So now the Coding part is also completed.
- Now run the application to see the output.







Result:

Thus a Simple Android Application for Native Calculator is developed and executed successfully.

PROGRAM 4

Aim:

To develop a Simple Android Application that draws basic Graphical Primitives on the screen.

Procedure:

Designing layout for the Android Application:

Designing Layout for Main Activity:

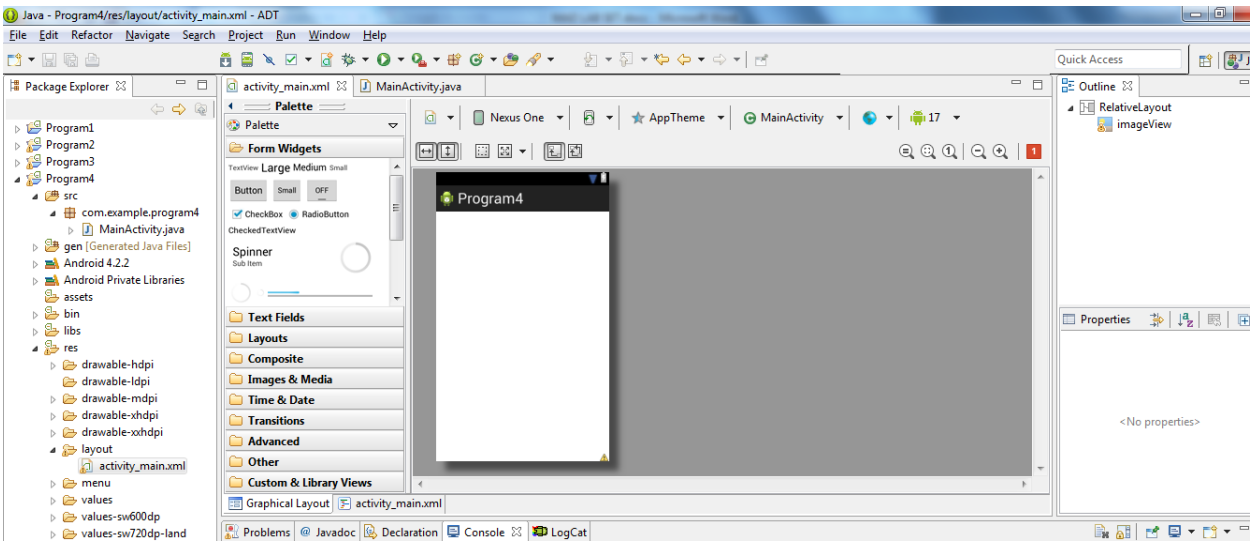
- Click on **Program4 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent">

   <ImageView
      android:layout_width="match_parent"
      android:layout_height="match_parent"
      android:id="@+id/imageView" />
</RelativeLayout>
```

- Now click on Design and your activity will look as given below.



- So now the designing part is completed.

Java Coding for the Android Application:

Click on **Program4 ->src -> com.example.Program4 -> MainActivity.**

```
package com.example.program4;

import android.os.Bundle;
import android.app.Activity;
```

```
import android.graphics.Bitmap;
import android.graphics.Canvas;
import android.graphics.Color;
import android.graphics.Paint;
import android.graphics.drawable.BitmapDrawable;
import android.widget.ImageView;

public class MainActivity extends Activity {

        @Override
    public void onCreate(Bundle savedInstanceState)
    {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        //Creating a Bitmap
        Bitmap bg = Bitmap.createBitmap(720, 1280, Bitmap.Config.ARGB_8888);

        //Setting the Bitmap as background for the ImageView
        ImageView i = (ImageView) findViewById(R.id.imageView);
        i.setBackgroundDrawable(new BitmapDrawable(bg));

        //Creating the Canvas Object
        Canvas canvas = new Canvas(bg);

        //Creating the Paint Object and set its color & TextSize
        Paint paint = new Paint();
        paint.setColor(Color.BLUE);
        paint.setTextSize(50);

        //To draw a Rectangle
        canvas.drawText("Rectangle", 420, 150, paint);
        canvas.drawRect(400, 200, 650, 700, paint);

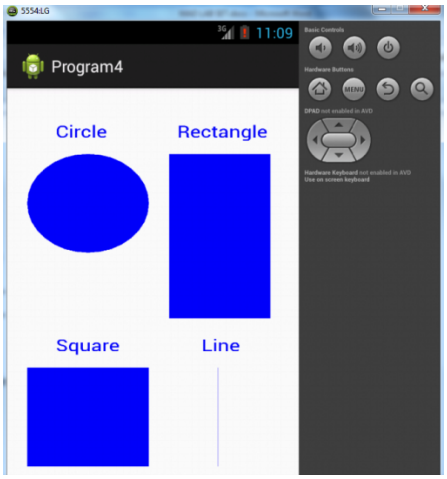
        //To draw a Circle
        canvas.drawText("Circle", 120, 150, paint);
        canvas.drawCircle(200, 350, 150, paint);

        //To draw a Square
        canvas.drawText("Square", 120, 800, paint);
        canvas.drawRect(50, 850, 350, 1150, paint);

        //To draw a Line
        canvas.drawText("Line", 480, 800, paint);
        canvas.drawLine(520, 850, 520, 1150, paint);
    }

}
```

- So now the Coding part is also completed.
- Now run the application to see the output.



Result:

Thus a Simple Android Application that draws basic Graphical Primitives on the screen is developed and executed successfully.

PROGRAM 5

Aim:

To develop a Simple Android Application that makes use of Database.

Procedure:

Designing layout for the Android Application:

Designing Layout for Main Activity:

- Click on **Program5 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<AbsoluteLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent">
   <TextView
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
```

```
    android:layout_x="50dp"
    android:layout_y="20dp"
    android:text="Student Details"
    android:textSize="30sp" />

<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_x="20dp"
    android:layout_y="82dp"
    android:text="Enter Rollno:"
    android:textSize="20sp" />

<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_x="24dp"
    android:layout_y="131dp"
    android:text="Enter Name:"
    android:textSize="20sp" />

<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_x="26dp"
    android:layout_y="181dp"
    android:text="Enter Marks:"
    android:textSize="20sp" />

<EditText
    android:id="@+id/Name"
    android:layout_width="150dp"
    android:layout_height="wrap_content"
    android:layout_x="152dp"
    android:layout_y="126dp"
    android:ems="10"
    android:inputType="text"
    android:textSize="20sp" />

<EditText
    android:id="@+id/Marks"
    android:layout_width="150dp"
    android:layout_height="wrap_content"
    android:layout_x="155dp"
    android:layout_y="172dp"
    android:ems="10"
    android:inputType="number"
    android:textSize="20sp" />

<EditText
    android:id="@+id/Rollno"
    android:layout_width="150dp"
    android:layout_height="wrap_content"
    android:layout_x="152dp"
    android:layout_y="77dp"
```

```
        android:ems="10"
        android:inputType="number"
        android:textSize="20sp">

        <requestFocus />
    </EditText>

    <Button
        android:id="@+id/Insert"
        android:layout_width="150dp"
        android:layout_height="wrap_content"
        android:layout_x="10dp"
        android:layout_y="256dp"
        android:text="Insert"
        android:textSize="30dp" />

    <Button
        android:id="@+id/Delete"
        android:layout_width="150dp"
        android:layout_height="wrap_content"
        android:layout_x="173dp"
        android:layout_y="257dp"
        android:text="Delete"
        android:textSize="30dp" />

    <Button
        android:id="@+id/Update"
        android:layout_width="138dp"
        android:layout_height="wrap_content"
        android:layout_x="15dp"
        android:layout_y="335dp"
        android:text="Update"
        android:textSize="30dp" />

    <Button
        android:id="@+id/View"
        android:layout_width="150dp"
        android:layout_height="wrap_content"
        android:layout_x="171dp"
        android:layout_y="338dp"
        android:text="View"
        android:textSize="30dp" />

    <Button
        android:id="@+id/ViewAll"
        android:layout_width="200dp"
        android:layout_height="wrap_content"
        android:layout_x="65dp"
        android:layout_y="401dp"
        android:text="View All"
        android:textSize="30dp" />

</AbsoluteLayout>
```

- Now click on Design and your activity will look as given below.

- Now go to XML code editor.

- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:orientation="vertical">

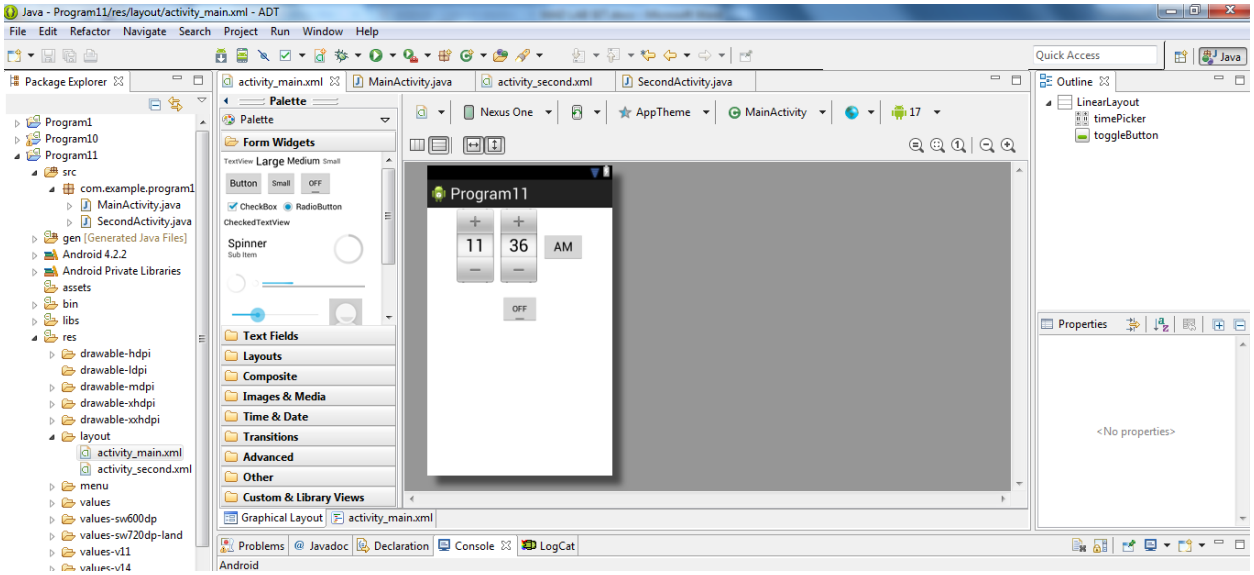
   <TimePicker
      android:id="@+id/timePicker"
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:layout_gravity="center" />

   <ToggleButton
      android:id="@+id/toggleButton"
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:layout_gravity="center"
      android:layout_margin="20dp"
      android:checked="false"
      android:onClick="OnToggleClicked" />

</LinearLayout>
```

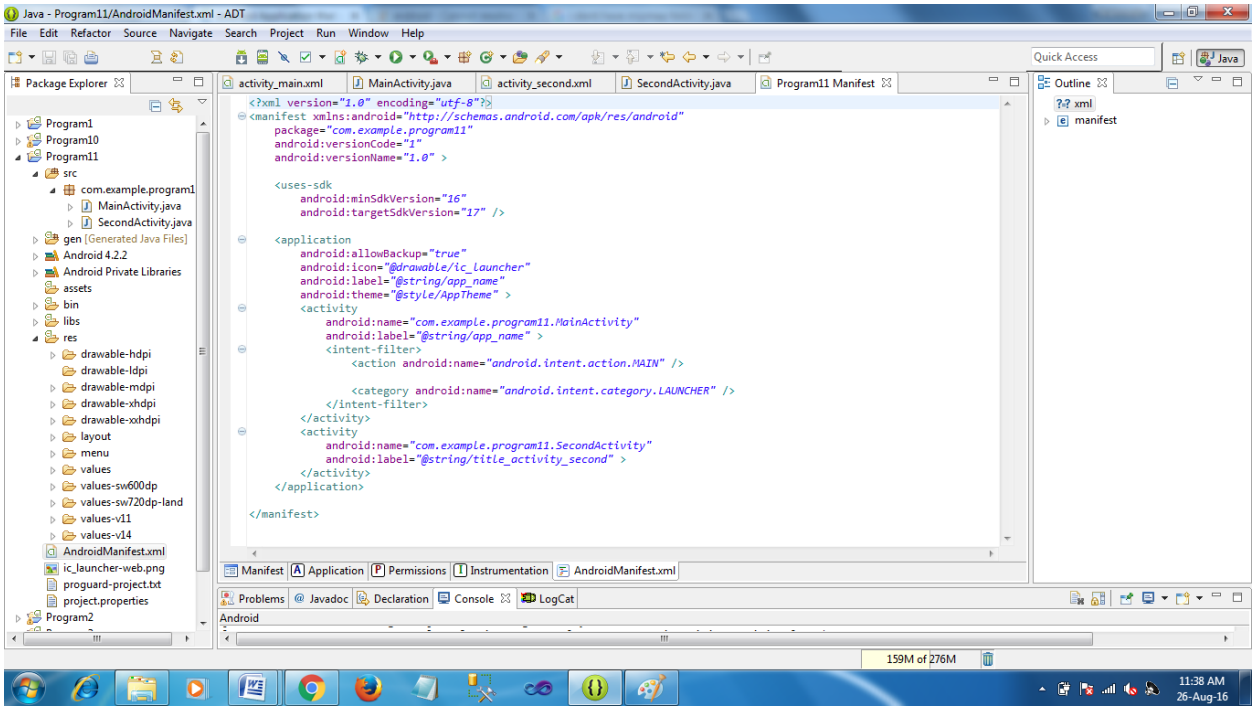
- Now click on **Design** and your application will look as given below.

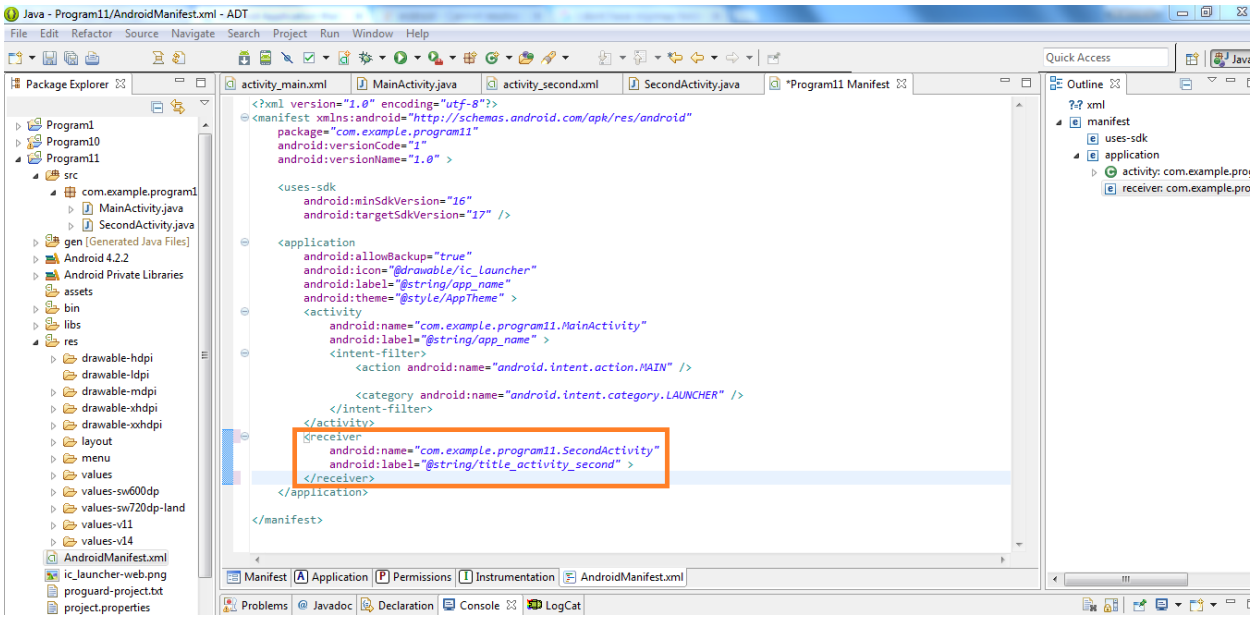


- So now the designing part is completed.

Changes in Manifest for the Android Application:

- Click on **Program11 -> manifests -> AndroidManifest.xml**





Java Coding for the Android Application:

Java Coding for Main Activity:

- Click on **Program11 -> java -> com.example.Program11 -> MainActivity.**

Code for MainActivity.java

```
package com.example.program11;

import java.util.Calendar;
import android.widget.ToggleButton;

import android.os.Bundle;
import android.app.Activity;
import android.app.AlarmManager;
import android.app.PendingIntent;
import android.content.Intent;
import android.view.Menu;
import android.view.View;
import android.widget.TimePicker;
import android.widget.Toast;

public class MainActivity extends Activity {

        TimePicker alarmTimePicker;
  PendingIntent pendingIntent;
  AlarmManager alarmManager;

  @Override
  protected void onCreate(Bundle savedInstanceState)
  {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);
    alarmTimePicker = (TimePicker) findViewById(R.id.timePicker);
    alarmManager = (AlarmManager) getSystemService(ALARM_SERVICE);
  }
  public void OnToggleClicked(View view)
  {
    long time;
    if (((ToggleButton) view).isChecked())
    {
      Toast.makeText(MainActivity.this, "ALARM ON", Toast.LENGTH_SHORT).show();
      Calendar calendar = Calendar.getInstance();
      calendar.set(Calendar.HOUR_OF_DAY, alarmTimePicker.getCurrentHour());
      calendar.set(Calendar.MINUTE, alarmTimePicker.getCurrentMinute());
      Intent intent = new Intent(this, SecondActivity.class);
      pendingIntent = PendingIntent.getBroadcast(this, 0, intent, 0);

      time=(calendar.getTimeInMillis()-(calendar.getTimeInMillis()%60000));
      if(System.currentTimeMillis()>time)
      {
        if (calendar.AM_PM == 0)
          time = time + (1000*60*60*12);
        else
```

```
            time = time + (1000*60*60*24);
        }
        alarmManager.setRepeating(AlarmManager.RTC_WAKEUP, time, 10000, pendingIntent);
    }
    else
    {
        alarmManager.cancel(pendingIntent);
        Toast.makeText(MainActivity.this, "ALARM OFF", Toast.LENGTH_SHORT).show();
    }
  }

}
```

- So now the Coding part of Main Activity is completed.

Java Coding for Second Activity:

- Click on **Program11 -> java -> com.example.Program11 -> SecondActivity.**

Code for SecondActivity.java:

```
package com.example.program11;

import android.media.Ringtone;
import android.content.BroadcastReceiver;
import android.media.RingtoneManager;
import android.net.Uri;

import android.content.Context;
import android.content.Intent;

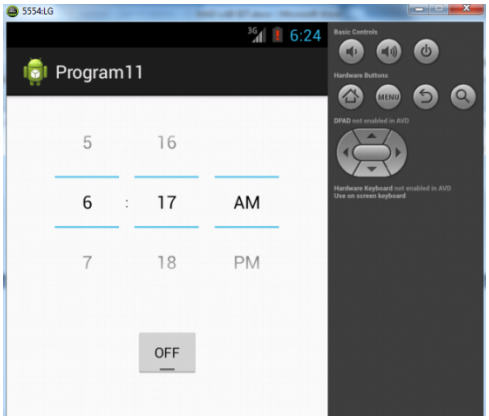
import android.widget.Toast;

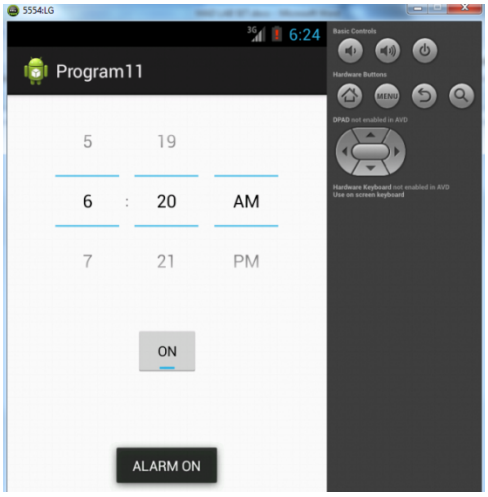
public class SecondActivity extends BroadcastReceiver {

        @Override
        public void onReceive(Context context, Intent intent)
        {
            Toast.makeText(context, "Alarm! Wake up! Wake up!", Toast.LENGTH_LONG).show();
            Uri alarmUri = RingtoneManager.getDefaultUri(RingtoneManager. TYPE_ALARM);
            if (alarmUri == null)
            {
                alarmUri = RingtoneManager.getDefaultUri(RingtoneManager. TYPE_NOTIFICATION);
            }
            Ringtone ringtone = RingtoneManager.getRingtone(context, alarmUri);
            ringtone.play();
        }
}
```

- So now the Coding part of Alarm Receiver is also completed.
- Now run the application to see the output.

Output:





Result:

Thus Android Application that creates Alarm Clock is developed and executed successfully.

PROGRAM 9

Aim:

To develop an Android Application that writes data to the SD Card.

Procedure:

Create Main Activity for the Android Application

Minimim Required SDK = API 15 and click **Next.**

Designing layout for the Android Application:

Designing Layout for Main Activity:

- Click on **Program9 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```

```
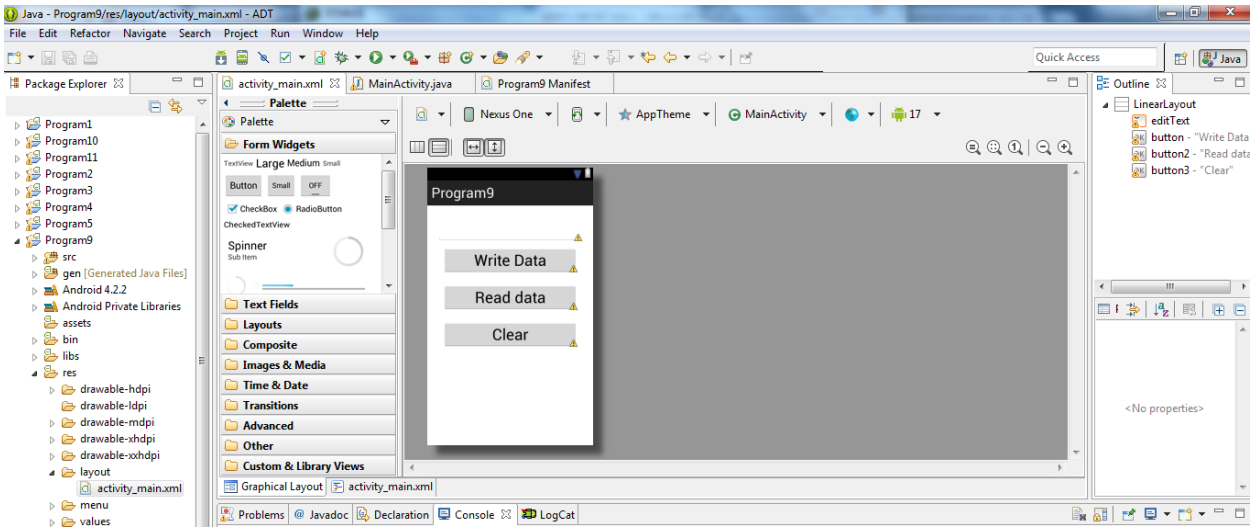
    <Button
        android:id="@+id/button3"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_margin="10dp"
        android:text="Clear"
        android:textSize="30dp" />

</LinearLayout>
```

- Now click on **Design** and your application will look as given below.



- So now the designing part is completed.

Changes in Manifest for the Android Application:

- Click on **Program9 -> manifests -> AndroidManifest.xml**
  - Now go to XML code editor.
  - Then delete the code which is there and type the code as given below.

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.example.program9"
    android:versionCode="1"
    android:versionName="1.0">

    <uses-sdk
        android:minSdkVersion="15"
        android:targetSdkVersion="17" />

    <uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE"/>
```

```
    <application
        android:allowBackup="true"
        android:label="@string/app_name"
        android:supportsRtl="true"
        android:theme="@style/AppTheme">
        <activity android:name=".MainActivity">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>

</manifest>
```

Java Coding for the Android Application:

Java Coding for Main Activity:

- Click on **Program9 -> java -> com.example.Program9 -> MainActivity.**

Code for MainActivity.java

```
package com.example.program9;

import android.os.Bundle;
import android.app.Activity;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.Toast;

import java.io.BufferedReader;
import java.io.File;
import java.io.FileInputStream;
import java.io.FileOutputStream;
import java.io.InputStreamReader;

public class MainActivity extends Activity {

        EditText e1;
  Button write,read,clear;
  @Override
  protected void onCreate(Bundle savedInstanceState)
  {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);

    e1= (EditText) findViewById(R.id.editText);
    write= (Button) findViewById(R.id.button);
```

```
        read= (Button) findViewById(R.id.button2);
        clear= (Button) findViewById(R.id.button3);

        write.setOnClickListener(new View.OnClickListener()
        {
            @Override
            public void onClick(View v)
            {
                String message=e1.getText().toString();
                try
                {
                    File f=new File("/sdcard/myfile.txt");
                    f.createNewFile();
                    FileOutputStream fout=new FileOutputStream(f);
                    fout.write(message.getBytes());
                    fout.close();
                    Toast.makeText(getBaseContext(),"Data Written in SDCARD",Toast.LENGTH_LONG).show();
                }
                catch (Exception e)
                {
                    Toast.makeText(getBaseContext(),e.getMessage(),Toast.LENGTH_LONG).show();
                }
            }
        });

        read.setOnClickListener(new View.OnClickListener()
        {
            @Override
            public void onClick(View v)
            {
                String message;
                String buf = "";
                try
                {
                    File f = new File("/sdcard/myfile.txt");
                    FileInputStream fin = new FileInputStream(f);
                    BufferedReader br = new BufferedReader(new InputStreamReader(fin));
                    while ((message = br.readLine()) != null)
                    {
                        buf += message;
                    }
                    e1.setText(buf);
                    br.close();
                    fin.close();
                    Toast.makeText(getBaseContext(),"Data Recived from
SDCARD",Toast.LENGTH_LONG).show();
                }
                catch (Exception e)
                {
                    Toast.makeText(getBaseContext(), e.getMessage(), Toast.LENGTH_LONG).show();
                }
            }
        });

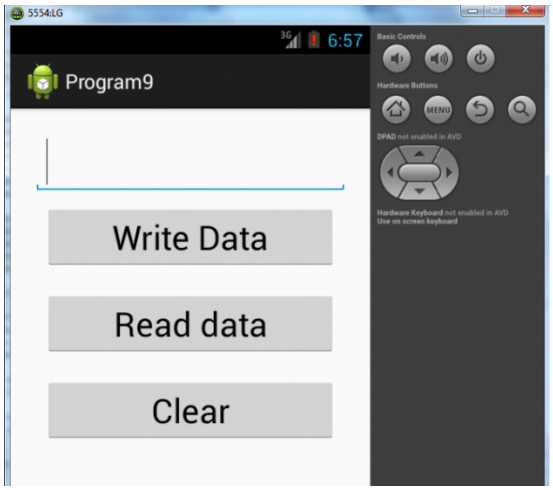
        clear.setOnClickListener(new View.OnClickListener()
```

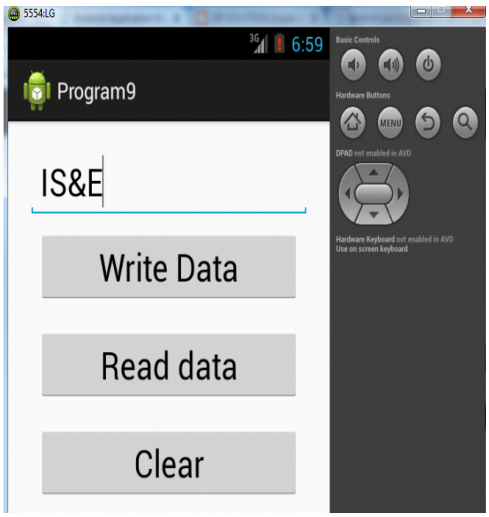
```
        {
            @Override
            public void onClick(View v)
            {
                e1.setText("");
            }
        });
    }

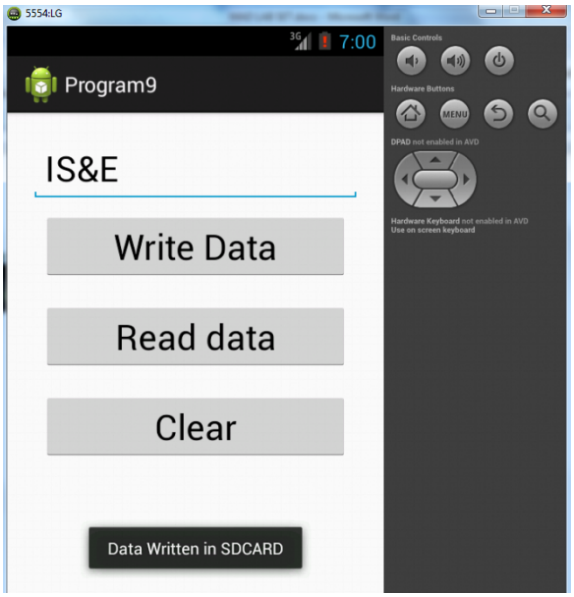
}
```

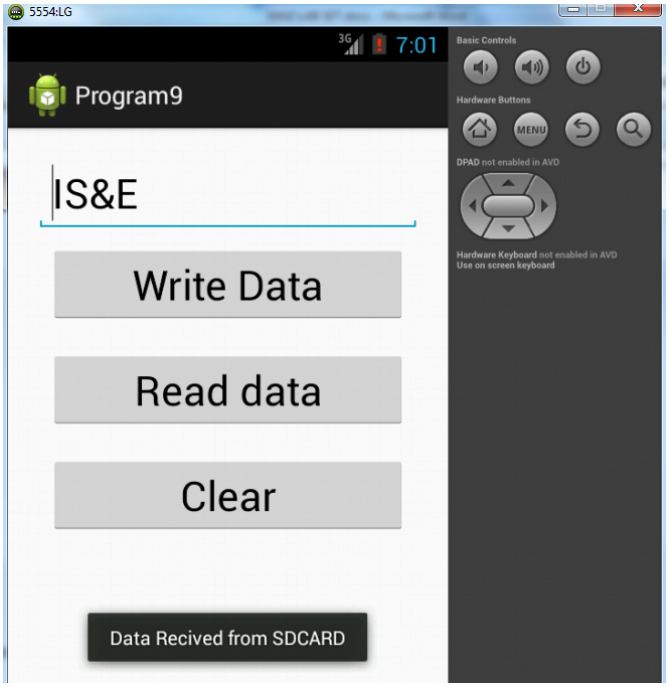
- So now the Coding part of Program 9 is also completed.
- Now run the application to see the output.

Output:









Result:

Thus Android Application that writes data to the SD Card is developed and executed successfully.

PROGRAM 7

Aim:

To build an application that implements multi-threading concept.

Procedure:

Create Main Activity for the Android Application

Designing layout for the Android Application:

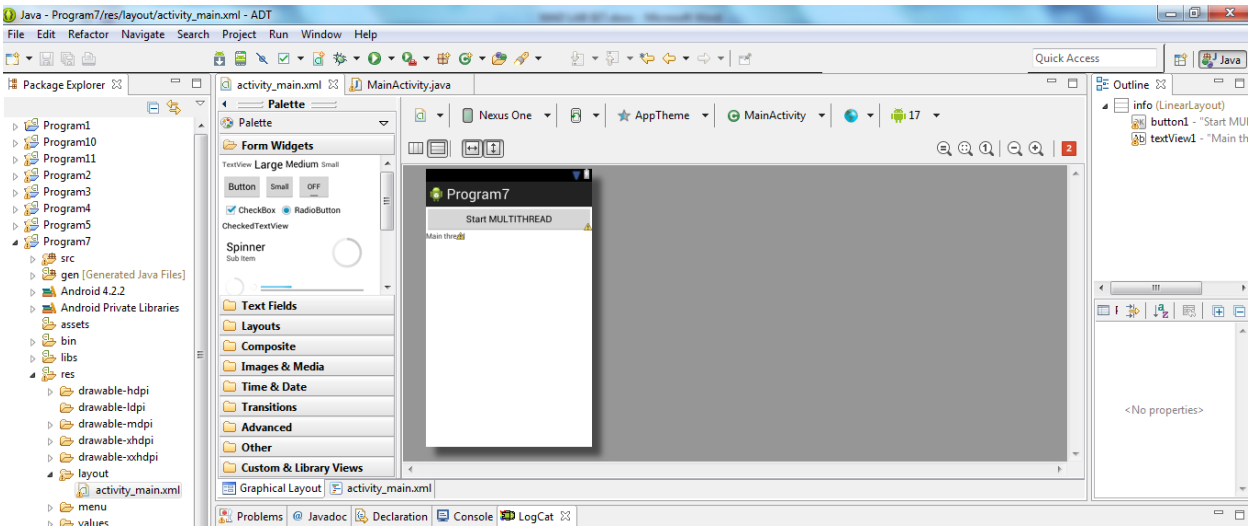
Designing Layout for Main Activity:

- Click on **Program7 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
   android:layout_width="match_parent"
   android:layout_height="match_parent"
   android:orientation="vertical"
   android:id="@+id/info">
    <Button
      android:id="@+id/button1"
      android:layout_width="match_parent"
      android:layout_height="wrap_content"
      android:onClick="fetchData"
      android:text="Start MULTITHREAD"/>
   <TextView
      android:id="@+id/textView1"
      android:layout_width="wrap_content"
      android:layout_height="wrap_content"
      android:text="Main thread"/>
</LinearLayout>
```

- Now click on **Design** and your application will look as given below.



- So now the designing part is completed.

Java Coding for the Android Application:

Java Coding for Main Activity:

- Click on **Program7 -> java -> com.example.Program7 -> MainActivity.**

Code for MainActivity.java

```
package com.example.program7;

import android.os.Bundle;
import android.app.Activity;

import android.os.Handler;
import android.view.View;
import android.widget.TextView;

public class MainActivity extends Activity {

        private  TextView tvOutput;
         private  static final int t1 = 1;
         private  static final int t2 = 2;
         private  static final int t3 = 3;
         @Override
         public void onCreate(Bundle savedInstanceState) {
            super.onCreate(savedInstanceState);
            setContentView(R.layout.activity_main);
            tvOutput = (TextView) findViewById(R.id.textView1);
```

```
}
public void fetchData(View v) {
   tvOutput.setText("Main thread");
   thread1.start();
   thread2.start();
   thread3.start();
}

Thread thread1 = new Thread(new Runnable() {

@Override
public void run() {
for (int i = 0; i < 5; i++) {
try {
Thread.sleep(1000);
} catch (InterruptedException e) {
e.printStackTrace();
}
handler.sendEmptyMessage(t1);
}

}
});
Thread thread2 = new Thread(new Runnable() {

   @Override
   public void run() {
   for (int i = 0; i < 5; i++) {
   try {
   Thread.sleep(1000);
   } catch (InterruptedException e) {
   e.printStackTrace();
   }
   handler.sendEmptyMessage(t2);
   }

   }
   });
Thread thread3 = new Thread(new Runnable() {

   @Override
   public void run() {
   for (int i = 0; i < 5; i++) {
   try {
   Thread.sleep(1000);
   } catch (InterruptedException e) {
   e.printStackTrace();
   }
   handler.sendEmptyMessage(t3);
   }

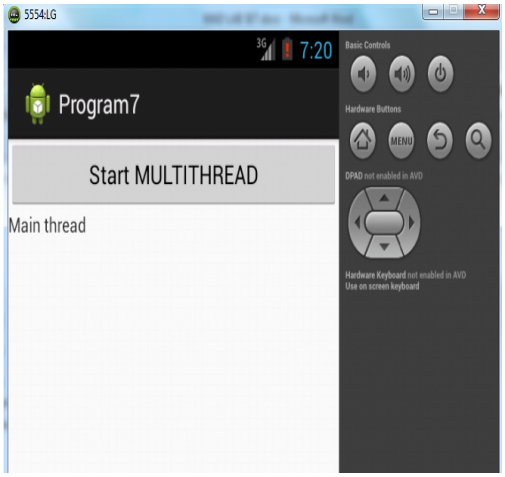
   }
   });
```

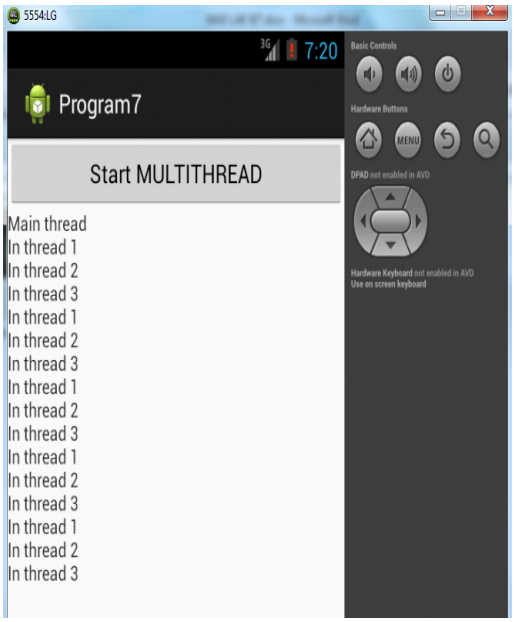
```
Handler handler = new Handler() {
public void handleMessage(android.os.Message msg) {
if(msg.what == t1) {
tvOutput.append("\nIn thread 1");
}
if(msg.what == t2) {
   tvOutput.append("\nIn thread 2");
   }
if(msg.what == t3) {
   tvOutput.append("\nIn thread 3");
   }
}
};
```

}

- So now the Coding part of Program 7 is also completed.
- Now run the application to see the output.

Output:





Result:

Thus Android Application that implements multi-threading concept is developed and executed successfully.

PROGRAM 8

Aim:

To develop a native application that uses GPS location information.

Procedure:

Create Main Activity for the Android Application

Designing layout for the Android Application:

Designing Layout for Main Activity:

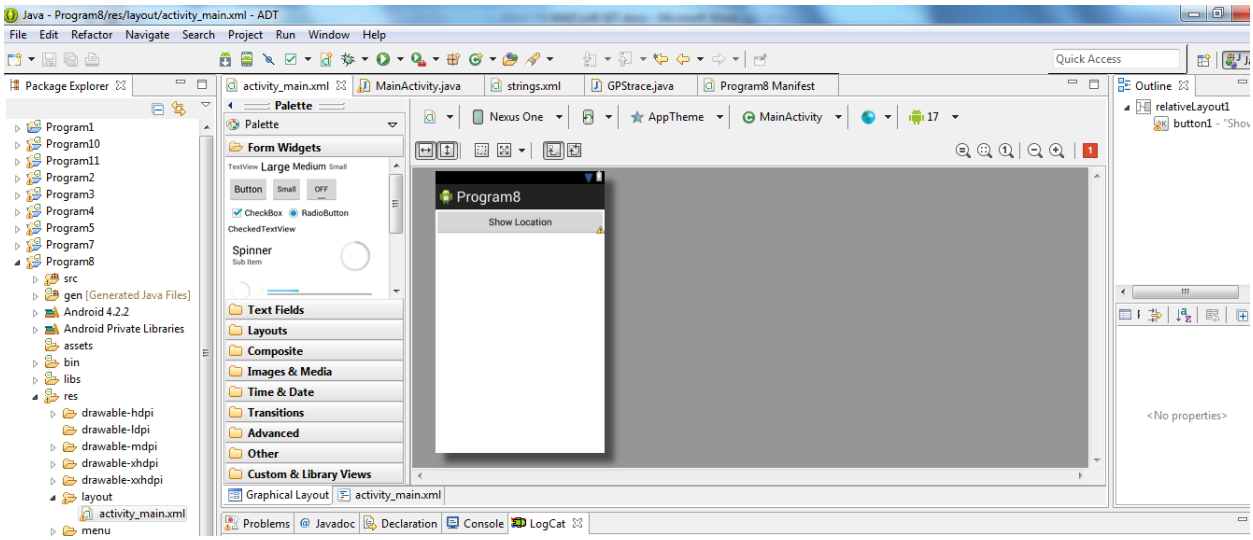
- Click on **Program8 -> res -> layout -> activity_main.xml.**
- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

Code for Activity_main.xml:

```
<?xml version="1.0"encoding="utf-8"?>
   <RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
       android:id="@+id/relativeLayout1"
       android:layout_width="match_parent"
       android:layout_height="match_parent">
 <Button
       android:id="@+id/button1"
       android:layout_width="match_parent"
       android:layout_height="wrap_content"
       android:text="Show Location"
       />

</RelativeLayout>
```

- Now click on **Design** and your application will look as given below.



- So now the designing part is completed.

Changes in Manifest for the Android Application:

- Click on **Program8 -> manifests -> AndroidManifest.xml**

- Now go to XML code editor.
- Then delete the code which is there and type the code as given below.

```
<?xml version="1.0"encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
   package="com.example.program8"
   android:versionCode="1"
   android:versionName="1.0">

   <uses-sdk
      android:minSdkVersion="8"
      android:targetSdkVersion="17"/>

   <uses-permission
   android:name="android.permission.ACCESS_FINE_LOCATION"/>
<uses-permission
   android:name="android.permission.INTERNET"/>

   <application
      android:allowBackup="true"
      android:icon="@drawable/ic_launcher"
      android:label="@string/app_name"
      android:theme="@style/AppTheme">
      <activity
         android:name="com.example.program8.MainActivity"
         android:label="@string/app_name">
         <intent-filter>
            <action android:name="android.intent.action.MAIN"/>

            <category android:name="android.intent.category.LAUNCHER"/>
         </intent-filter>
      </activity>
   </application>

</manifest>
```

Java Coding for the Android Application:

Java Coding for Main Activity:

- Click on **Program8 -> java -> com.example.Program8 -> MainActivity.**

Code for MainActivity.java

```
package com.example.program8;

import android.os.Bundle;
import android.app.Activity;
import android.view.View;
import android.widget.Button;
```

```
import android.widget.Toast;

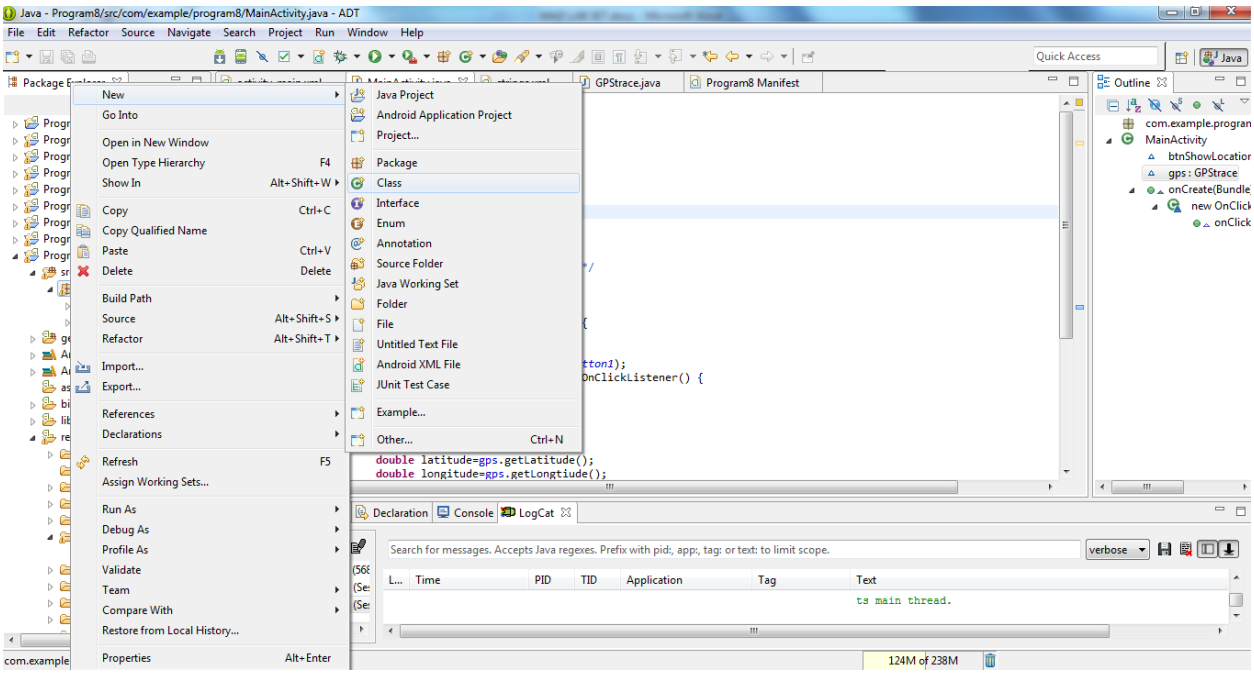
public class MainActivity extends Activity {

        /** Called when the activity is first created. */
   Button btnShowLocation;
   GPStrace gps;
   @Override
   public void onCreate(Bundle savedInstanceState) {
      super.onCreate(savedInstanceState);
      setContentView(R.layout.activity_main);
      btnShowLocation=(Button)findViewById(R.id.button1);
      btnShowLocation.setOnClickListener(new View.OnClickListener() {
         @Override
         public void onClick(View v) {
            // TODO Auto-generated method stub
            gps=new GPStrace(MainActivity.this);
            if(gps.canGetLocation()){
               double latitude=gps.getLatitude();
               double longitude=gps.getLongtiude();
               Toast.makeText(getApplicationContext(),"Your Location is
\nLat:"+latitude+"\nLong:"+longitude, Toast.LENGTH_LONG).show();
            }
            else
            {
               gps.showSettingAlert();
                     }

         }
      });
   }

}
```

Create one more Java class file Named as “GPStrace.java” in the same package as shown below



Code for GPStrace.java

```
package com.example.program8;

import android.app.AlertDialog;
import android.app.Service;
import android.content.Context;
import android.content.DialogInterface;
import android.content.Intent;
import android.location.Location;
import android.location.LocationListener;
import android.location.LocationManager;
import android.os.Bundle;
import android.os.IBinder;
import android.provider.Settings;

public class GPStrace extends Service implements LocationListener{
        private final Context context;
